

Week 1 – Task 2: Google Colab Hands-on Practice

Objective:

Run AI-generated Python code using Google Colab.

Instructions:

- Create a Google Colab account.
- Generate Python code to add two numbers.
- Generate code to calculate average of 5 numbers.
- Generate code to check even or odd number.
- Run all programs in Google Colab and modify values.

Submission Requirements:

- Submit your Google Colab notebook link.
- Write short explanation of output results.

Learning Outcome:

Students will understand basic Python execution and logic building using AI tools.
